

SUPPLEMENTAL FIGURE 2. NK cell requirement for the optimal induction of IL-12p70-producing capacity of DCs co-stimulated with poly-I:C. IL-12p70 production by J558-CD40L-stimulated immature DCs (iDCs), DCs treated with the standard cytokine cocktail (sDCs), or DCs treated with IL-18/IFN α or IL-18/IFN α /poly-I:C with or without autologous NK cells. Data recorded as the mean (\pm SD) of triplicate cultures. Data shown was obtained from one representative experiment of three performed, all yielding similar results.
